About This Presentation

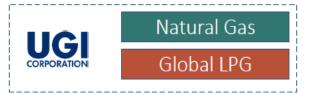

This presentation contains statements, estimates and projections that are forward-looking statements (as defined in Section 21E of the Securities and Exchange Act of 1934, as amended). Management believes that these are reasonable as of today's date only. Actual results may differ significantly because of risks and uncertainties that are difficult to predict and many of which are beyond management's control. You should read UGI's Annual Report on Form 10-K for a more extensive list of factors that could affect results. Among them are adverse weather conditions (including increasingly uncertain weather patterns due to climate change) and the seasonal nature of our business; cost volatility and availability of all energy products, including propane, natural gas, electricity and fuel oil; increased customer conservation measures; the impact of pending and future legal proceedings, liability for uninsured claims and for claims in excess of insurance coverage; domestic and international political, regulatory and economic conditions in the United States and in foreign countries, including the current conflicts in the Middle East and the withdrawal of the United Kingdom from the European Union, and foreign currency exchange rate fluctuations (particularly the euro); the timing of development of Marcellus Shale gas production; the availability, timing and success of our acquisitions, commercial initiatives and investments to grow our business; our ability to successfully integrate acquired businesses and achieve anticipated synergies; the interruption, disruption, failure, malfunction, or breach of our information technology systems, including due to cyber-attack; the inability to complete pending or future energy infrastructure projects; our ability to achieve the operational benefits and cost efficiencies expected from the completion of pending and future transformation initiatives at our business units; uncertainties related to the global pandemics, including the duration and/or impact of the COVID-19 pandemic; and the extent to which we are able to utilize certain tax benefits currently available under the CARES Act and similar tax legislation and whether such benefits will remain available in the future.

Information presented herein is as of September 30, 2020 unless otherwise stated.

Use of Non-GAAP Measures

In this presentation, Management uses certain non-GAAP financial measures, including UGI Corporation adjusted earnings per share, UGI Corporation Free Cash Flow, UGI Corporation Adjusted Earnings before interest, taxes, depreciation, and amortization ("EBITDA"), Midstream & Marketing Total Margin and UGI International Total Margin. These financial measures are not in accordance with, or an alternative to, GAAP and should be considered in addition to, and not as a substitute for, the comparable GAAP measures. Management believes the presentation of these non-GAAP financial measures provides useful information to investors to more effectively evaluate period-over-period earnings, profitability and cash flow generation of the Company's businesses. Reconciliations of these non-GAAP financial measures to the most directly comparable financial measure calculated and presented in accordance with GAAP are presented in the Appendix of this presentation.

⁽a) Income taxes associated with pre-tax adjustments determined using statutory business unit tax rate.

⁽b) Includes the effects of rounding.

⁽c) Costs associated with extinguishment of debt in 2015 are included in interest expense on the Consolidated Statements of Income.

⁽d) Management uses "adjusted net income attributable to UGI Corporation" and "adjusted diluted earnings per share," both of which are financial measures not in accordance with GAAP, when evaluating UGI's overall performance. Non-GAAP financial measures are not in accordance with, or an alternative to, GAAP and should be considered in addition to, and not as a substitute for, the comparable GAAP measures. Management believes that these non-GAAP measures provide meaningful information to investors about UGI's performance because they eliminate the impact of gains and losses on commodity and certain foreign currency derivative instruments not associated with current-period transactions and other significant discrete items that can affect the comparison of period-over-period results
